WHERE HOPE WILL LIVE

We must grow. Our ability to give the very highest level care depends on it. The new Center will be a place that speaks of our commitment to providing world-class care to our patients who need it most — the ones fighting for their very lives.

ADDITIONAL SPACE

We are at capacity. Nationwide, the number of children diagnosed with cancer grows each year. That, coupled with the population growth of children in our city and state means we will continue to treat more children with cancer.

Additionally, the innovative cancer treatments and research that will spring from the Chan Soon-Shiong Children’s Precision Medicine Institute and our affiliation with the Pediatric Cancer MoonShot Consortium will bring even more patients to Phoenix Children’s — many from out of the state, and even the country.

We currently treat more children and teens with hemophilia and sickle cell anemia than anywhere in the state... patients who also utilize our clinic and infusion center.

INCREASED SAFETY

Patients fighting cancer are, by and large, the highest acuity patients we treat — the very sickest. Yet right now, some patients may need to travel to five different areas within the hospital on a single day. Their care needs to be consolidated into one space.

The new Center will have treatment rooms on site, meaning patients won’t have to be transferred to operating rooms for simple procedures. They will be an elevator ride away from the Emergency Department, Imaging and 7th Floor inpatient areas. An on-site pharmacy will allow staff to easily get medications, and the lab on the floor space above the new Center means a quicker turnaround time for results.

BRINGING THE BEST TO PHOENIX CHILDREN’S

The additional space, resources, and a facility that is state-of-the-art will enable us to recruit world-renowned talent and leading experts in the fields of oncology and hematology. It’s people who matter most, and we need more of the very best.
